BLOCKCHAIN INSIGHTS

"Blockchain solves the problem of manipulation. When I talk about it in this way, I see the lightbulbs go on."

– **Vitalik Buterin**

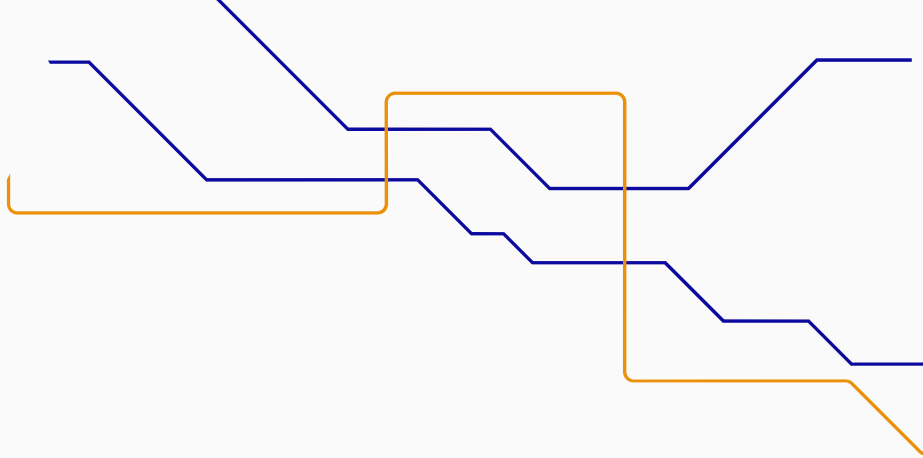

The Rise of Blockchain in India

Blockchain technology is reshaping industries worldwide, offering secure, transparent, and decentralized solutions. Indian companies are actively integrating blockchain to enhance security, streamline operations, and improve digital identity verification. With rapid adoption across sectors like finance, healthcare, and supply chain management, blockchain is proving to be a game-changer.

From Polygon's global expansion to TCS's blockchain-based trade finance solutions, Indian enterprises are driving innovation in this space. However, challenges such as scalability, regulation, and interoperability remain key areas to address. The future of blockchain lies in overcoming these barriers and leveraging its full potential for economic and technological growth.

TERMS OF THE WEEK

01 Decentralization
